

# Entrepreneurial developers

---

Talkamatic is expanding and we are looking for curious and brave new colleagues with an interest in the future of user interfaces, voice technology and dialogue. Talkamatic is a research driven company within the field of natural dialogue and conversational interfaces. You've surely spoken with Siri, heard about Alexa or tried to talk with your car, had a chat with a less satisfying chat-bot or even tried out Google Home or experimented with Microsoft Cortana. We all know that there is a life with computers beyond touch screen interfaces, and at Talkamatic we are dedicated to making communication in that post-screen-world as smooth as possible.

As a developer at Talkamatic you will work in a combination of product development and customer projects in a hungry and highly skilled agile development team. Some projects might be working directly for a client as a consultant and others together with the in-house team. You should preferably have knowledge and experience in software development and programming in a combination with voice, dialogue and conversational systems. But if you are strong on either side and a fast learner you might still be a perfect fit into our growing team, as we will make sure you learn the rest as we go.

You should be triggered by words and acronyms such as NLP, TTS, Dialogue Management, Python, Git, Jenkins, Taiga, AI, Machine Learning, ASR, NLU, NLG, GF, Scrum, Gerrit and TDM. Our offices are located in Gothenburg, Sweden and we do need you to be fluent in English. Your age, sex, cultural background, religion or other preferences are of no interest to us as long as you are a person that can help us move forward and push the limits for how we communicate with computers today and in the future.

Please send us your application to [fredrik@talkamatic.se](mailto:fredrik@talkamatic.se) and if you have any thoughts or questions feel free to call at +46-703-602190.

Talkamatic are experts within dialogue, natural language, speech technologies and conversational interfaces. We deliver easy, fast and cost effective development of next generation conversation based user interfaces. Read more at [www.talkamatic.se](http://www.talkamatic.se).
